**PLATFORM**

The report presents Placement Opportunities With Entrepreneurial Reach (POWER) platform with special focus on technical aspects. The platform is based and builds on the results from WP1 (interviews, surveys, analysis of other platforms etc.) and offers functional specifications of the POWER platform. The file is for those who would like to maintain and develop system in the future.

The repository of the software is stored in GitLab with detailed documentation of code and implemented changes.

The additional information about code is founded in *power-djboot-master.tar.gz* file.

The documentation is splitted in the following parts:

- Project directory structure
- Runtime platform NGNIX
- Database schema

# 1. Introduction

The POWER platform is built on the Django Boilerplate development platform. Django is a full featured Python Web framework that follows the model-view-template architectural pattern. It removes the complexity of creating database-driven websites with plug and play components and allows rapid development for web projects.

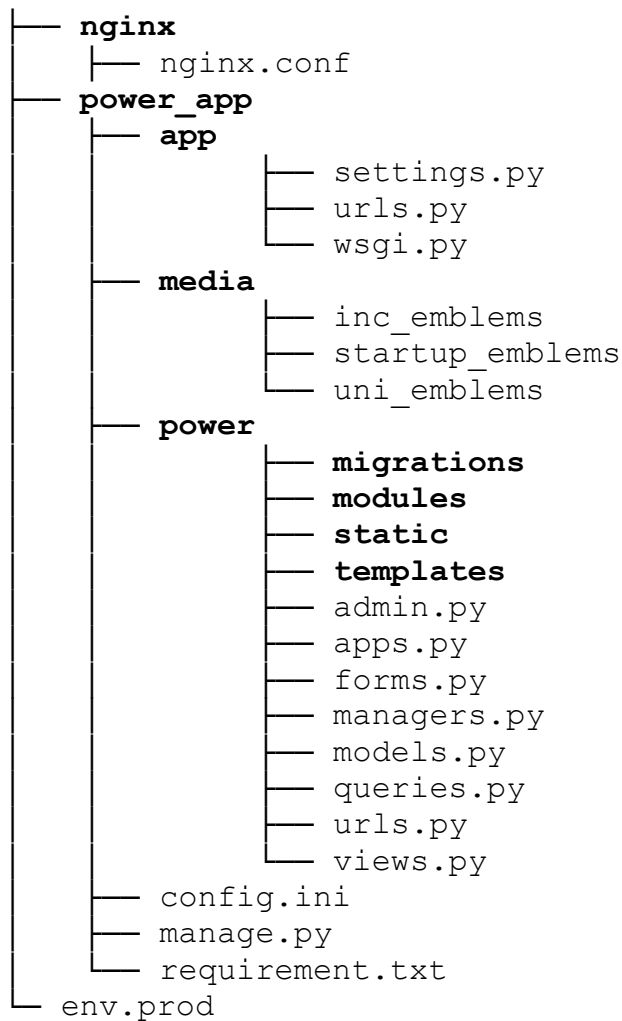

Main software versions used in the POWER platform:

- Python 3.6.9
- Django 3.0.4

## 2. Directory structure

The directory structure of the POWER platform, taking into account the essential elements of the platform:

### 3. Runtime platform - NGINX

The POWER application runs on the NGINX web platform, the configuration of which is located in the `/nginx/nginx.conf` file.

`/nginx/nginx.conf`

```
server {
    listen 80;
    server_name power.cti.p.lodz.pl;
    return 301 https://power.cti.p.lodz.pl$request_uri;
}

server {
    listen 443 ssl;

    server_name power.cti.p.lodz.pl;

    ...
}
```

## **4. Directory of the POWER platform**

### **1. /app**

Dostęp administracyjny do aplikacji POWER oraz jej konfiguracja

### **2. /media**

Katalog w który przechowywane są obiekty wgrywane przez użytkowników w tym loga poszczególnych użytkowników platformy

### **3. /power**

Główny katalog w którym znajduje się kod całej platformy

## 5. /Power - Main directory of the POWER platform

### 4. /migrations

The catalog contains modifications to the database structure that were created during the creation of the platforms.

### 5. /modules

Additional modules – describe In 6. /modules

### 6. /static

Directory with static elements – describe In 7. /static

### 7. /templates

The POWER platform templates – describe In 8. /templates

### 8. admin.py

```
class CustomUserAdmin (UserAdmin) :
```

### 9. apps.py

```
from django.apps import AppConfig

class PowerConfig (AppConfig) :
```

### 10. forms.py

```
from .models import (
    StudentProfile,
